

1 ABSTRACT

2
3 The present invention relates to a tip section for a cue stick for use in billiards, snooker
4 and pool. The tip section may be connected to either a butt section of a two piece cue, or
5 to the shortened shaft end of an existing cue stick butt section. The tip section is
6 composed of a hollow tube into which stiffening members and weights may be
7 introduced to alter the weight, balance, flex and kick of the tip section. The tip section
8 can be retrofitted to an existing butt section, used to repair a cue stick with a damaged tip
9 segment, or be part of a new cue.
